

1. Preparation

- Use the appropriate equipment
 - Crane length?
 - Type of suction device (capacity)?
 - Situation (canopy, balcony, interior glazing, etc.)?
- Ensure a clean and tidy work area, free of obstacles.

2. LMRA

- Check for damage to the lifting equipment.
- Ensure that the rotating parts are locked.
- Is the lifting equipment periodically inspected?
- Wind force 6 or higher: do not lift!
- Thunderstorm: do not lift!
- Frost: do not install glass!
- Heavy rain: do not install glass!
- Is the lifting machine positioned on a flat, hard surface?

3. Safety

- Mark off the lifting area.
- Persons must never be under the load!
- Ensure a stable surface for support.
- Avoid hand contact; use PPE (personal protective equipment).
- Check that the rotating parts are locked.
- Use vacuum suction cups to guide the glass.
- Keep full attention on the lift at all times.

4. Communication

- Communicate with the operator via the radio.
- Know and use the hand signals.
